

MAXDRAIN[®] – P8

DRAINAGE MEMBRANE FOR THE PROTECTION OF FOUNDATIONS, WALLS AND SLABS

DESCRIPTION

MAXDRAIN - P8 is a high density polyethylene (HDPE) membrane formed by truncated cones, of high compression resistance and high draining capacity.

USES

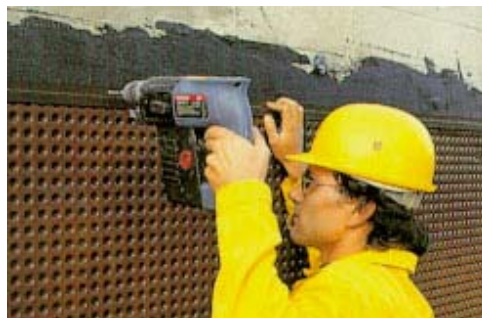

- Protection and drainage of underground foundation walls.
- Protection of waterproofing.
- Tunnels.
- Ventilation of retaining and interior walls.
- In floor slabs, prevents rising dampness in contact with saturated grounds.

ADVANTAGES

- Easily installed system.
- Excellent chemical resistance.
- High compression resistance.
- Resistant to roots.
- Does not rot.
- Appropriate for contact with drinking water.

APPLICATION INSTRUCTIONS

Installation of the membrane is done by unrolling and placing the truncated cones against the wall, foundation or slab to be protected forming a chamber through which air and water vapour will circulate. The membrane is fixed mechanically to the substrate using an anchorage washer and a steel nail. The top seal of the membrane on walls is done using a polyethylene profile.

COLOUR

Brown.

PACKAGING

Pallet with 24 rolls of 1.00 m. x 20.00 m.

Pallet with 12 rolls of 1.50 m. x 20.00 m.

Pallet with 12 rolls of 2.00 m. x 20.00 m.

Bags of 250 anchorage buttons.

Polyethylene profiles for top seal: Battens 2.50 m.

TECHNICAL DATA

Material	HDPE
Colour	Brown
Thickness (mm. approx.)	0.6.
Height of cones (mm)	8
Number of cones (u / m2)	1,332
Volume of air contained in cones (lt. / m2):	4.6
Drainage capacity (lt. / s. m):	5.5
Compression resistance (KN / m2)	200
Thermal range (°C)	-40 to + 80
Fire class DIN 4102	B2

GUARANTEE
